

Practical 10: Using Vuforia Engine to create Augmented Reality Content

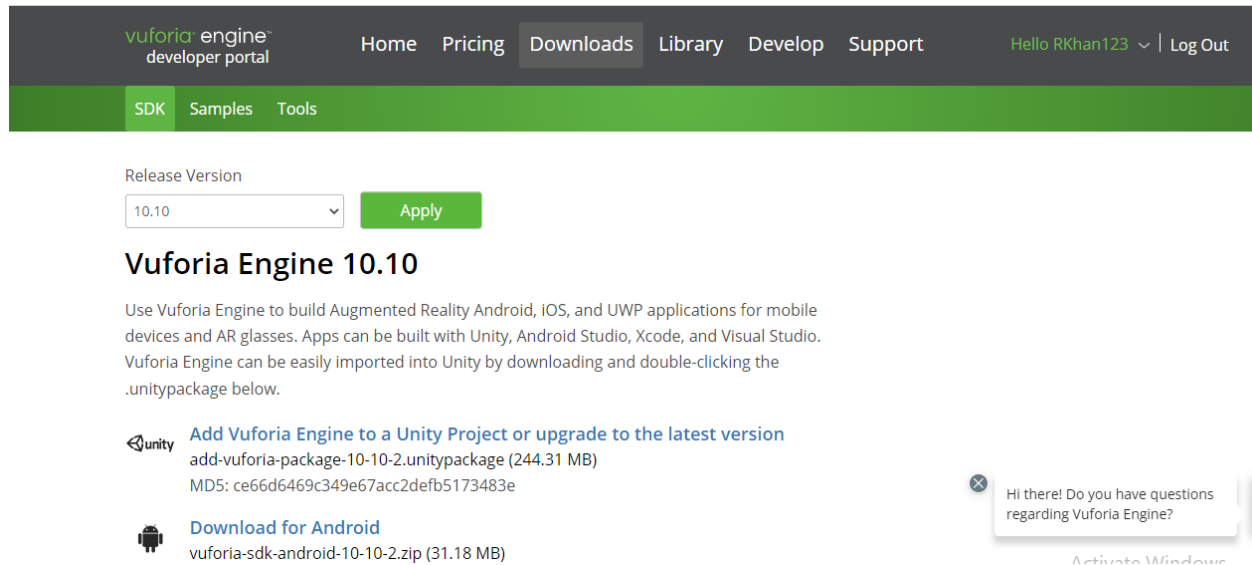

Vuforia is an augmented reality software development Kit (SDK) for mobile devices that enables the creation of Augmented reality applications. It uses Computer Vision technology to recognize and track Image targets and 3D objects in real time

Creating your project

Create a new 3D project in Unity by the name: VuforiaContent

Getting Vuforia sdk

Go to <https://developer.vuforia.com>

The screenshot shows the Vuforia Engine developer portal. The top navigation bar includes links for Home, Pricing, Downloads (selected), Library, Develop, and Support. A user is logged in as 'Hello RKhan123'. Below the navigation bar, there are tabs for SDK, Samples, and Tools. The 'Release Version' dropdown is set to '10.10'. The main heading is 'Vuforia Engine 10.10'. Below this, there is a description of the engine and its compatibility. Two download links are provided: 'Add Vuforia Engine to a Unity Project or upgrade to the latest version' (a .unitypackage file) and 'Download for Android' (a .zip file). A small notification box on the right says 'Hi there! Do you have questions regarding Vuforia Engine?'.

Create an account. Login by the account

Go to Downloads

Click on Add Vuforia engine to a Unity Project or Upgrade to latest version

Click Agree

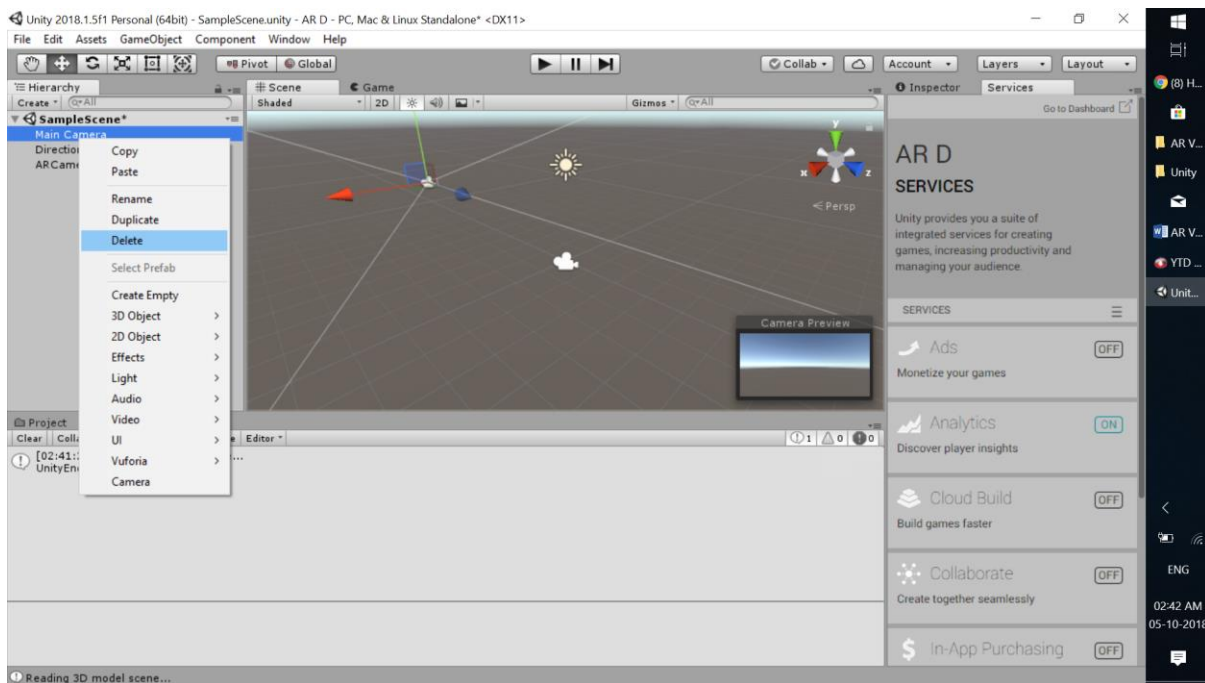

This downloads add-vuforia-package-10-8-4 package file

Drag this file in your Unity project's Assets folder then click import in the window. Click on Update if it asks

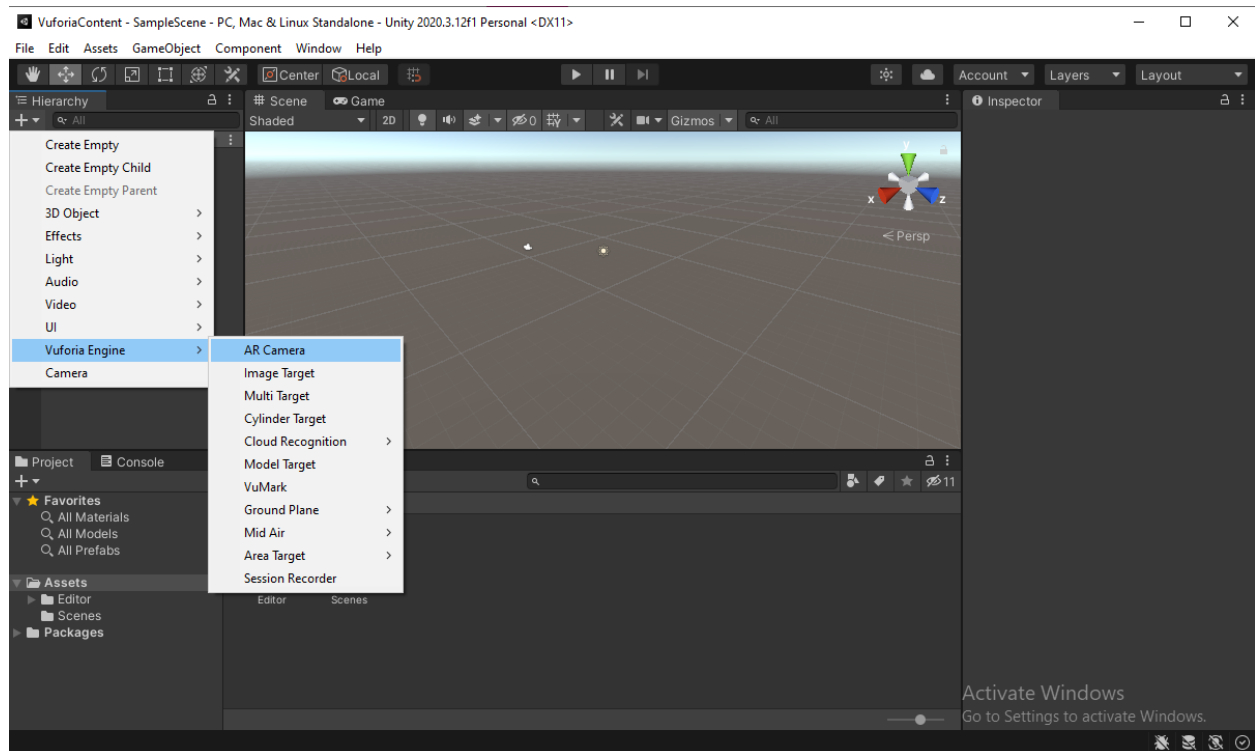

Adding Vuforia Engine to your Unity Project

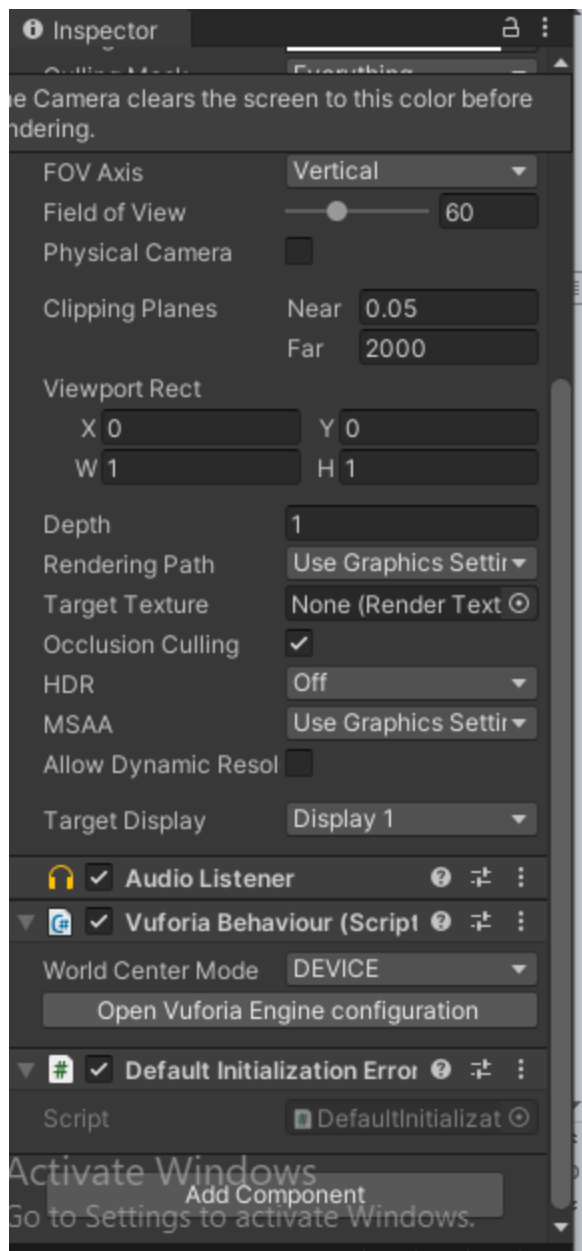

Remove the Main Camera

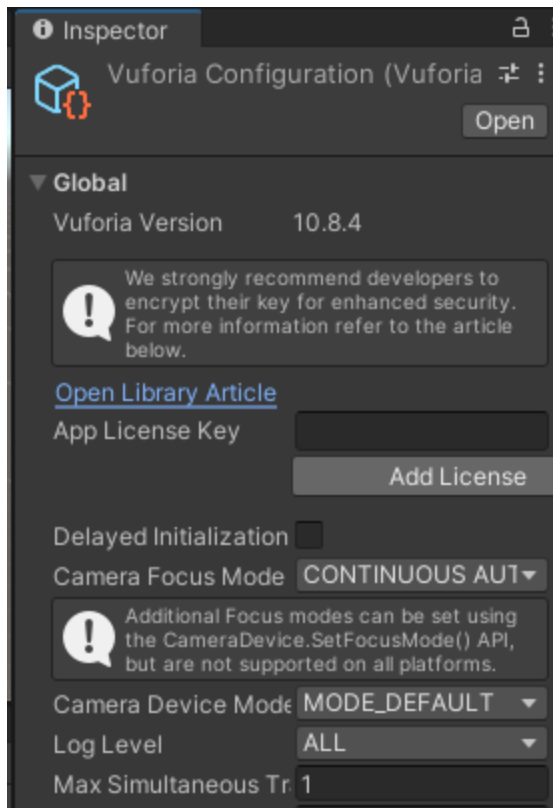

Click on + in hierarchy-> Vuforia Engine -> AR Camera

Select AR Camera, In inspector window click on Open Vuforia Engine Configuration

Click on Add License it opens developer.vuforia.com

In License Manager Click on Login

Click on image name myimage

[Update Target](#) [Show Features](#)

Click on Show Features

This shows what camera looks for i.e. feature points

[Update Target](#) [Hide Features](#)

Come back to myimagedb and Click Download Database

Download Database

1 of 1 active targets will be downloaded

Name:
myimagedb

Select a development platform:

☐ Android Studio, Xcode or Visual Studio

☒ Unity Editor

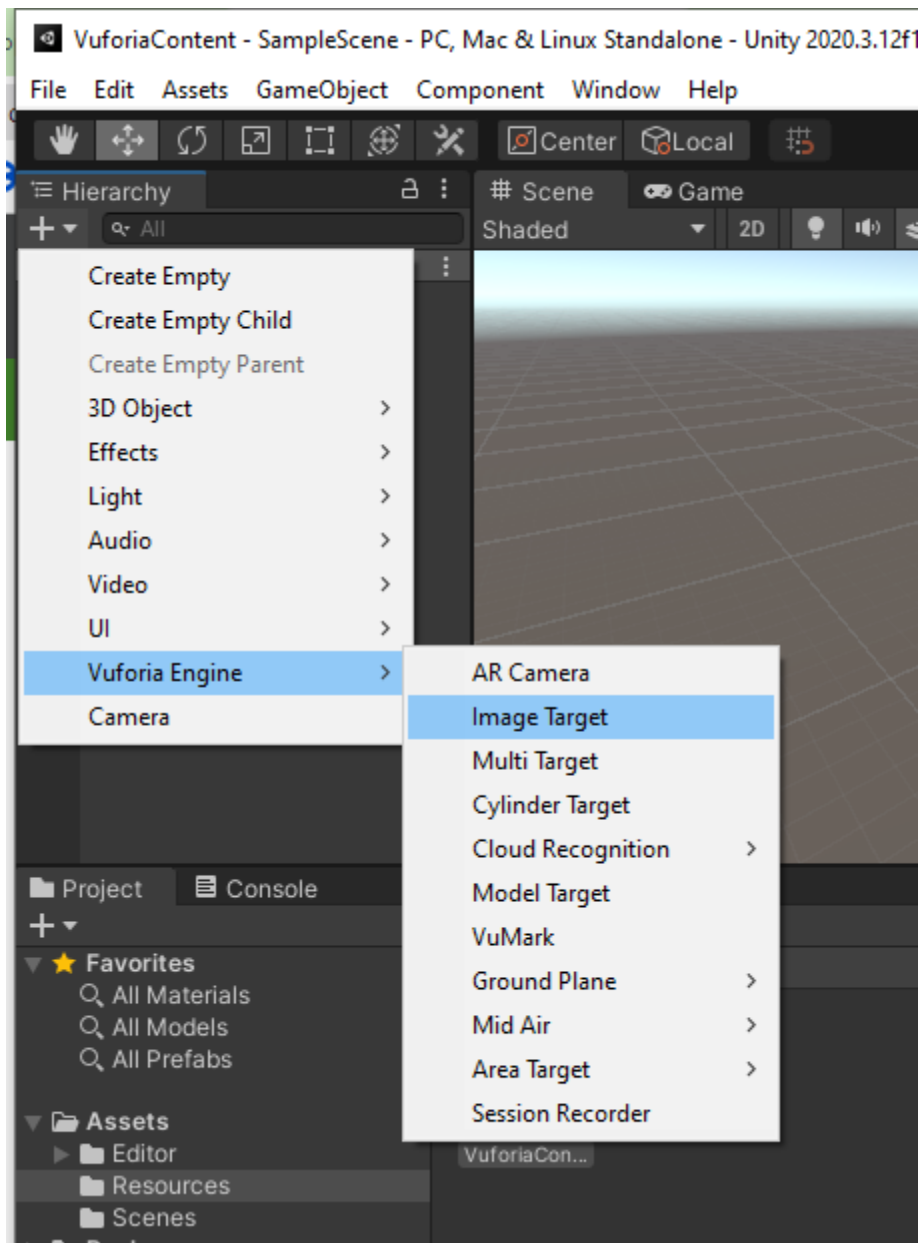

CancelDownload

Select Unity Editor and click Download

This will download myimagedb.unitypackage

Importing Image Target database in Unity Project

Click on + in hierarchy-> Vuforia Engine-> Image target

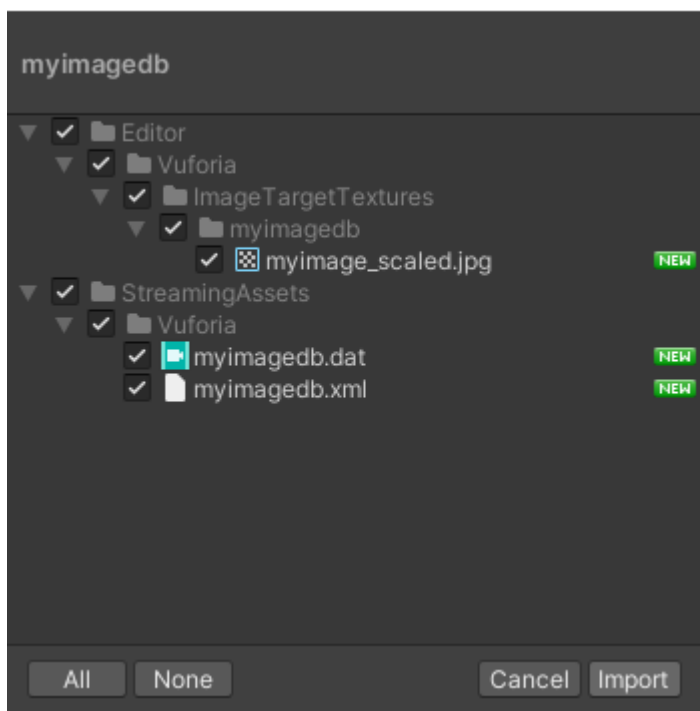

Select Imagetarget in Inspector Window Choose Type: From database

Click Skip

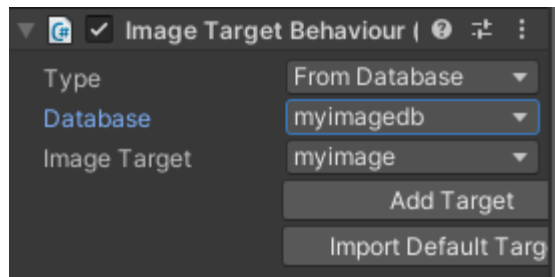

Drag and drop myimagedb.unitypackage in your Unity project and Click Import

Now for the Imagetarget, in the inspector window

Database: myimagedb

Imagetarget: it chooses the image from database

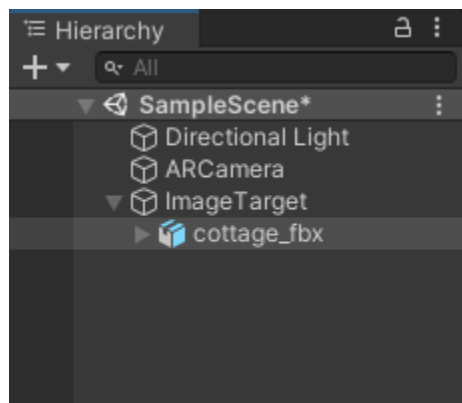

Now when you zoom in the scene on your image target you can see the image

Adding fbx model

Download an fbx model and drop it in assets folder.

Now drag it in hierarchy and drop it over the imagetarget to make its child

Creating AR content with Vuforia

Vuforia is an augmented reality software development Kit (SDK) for mobile devices that enables the creation of Augmented reality applications. It uses Computer Vision technology to recognize and track Image targets and 3D objects in real time

Go to

<http://ole.unity.com/vuforialive2018>

click on Download CreatingARWithVuforia.zip

<https://unity3d.com/partners/vuforia>

click on "Get started with Unity sample assets"

click on "Add to My Assets"

in Unity

Create a New project

Template- VR Lightweight RP

Name of the Project: Vuforia

Start Unity again and open your project

Window-> Asset store

Search Vuforia core samples

Click Download

Click Import

Click Install/Upgrade

Select All and click Import

Edit-> Project Settings-> Player

Under XR Settings

Under XR Support Installers

Click on Vuforia Augmented Reality

Download it and Install

Close Unity for Installation to complete

Edit-> Project Settings-> Player

Check "Vuforia Augmented Reality Supported"

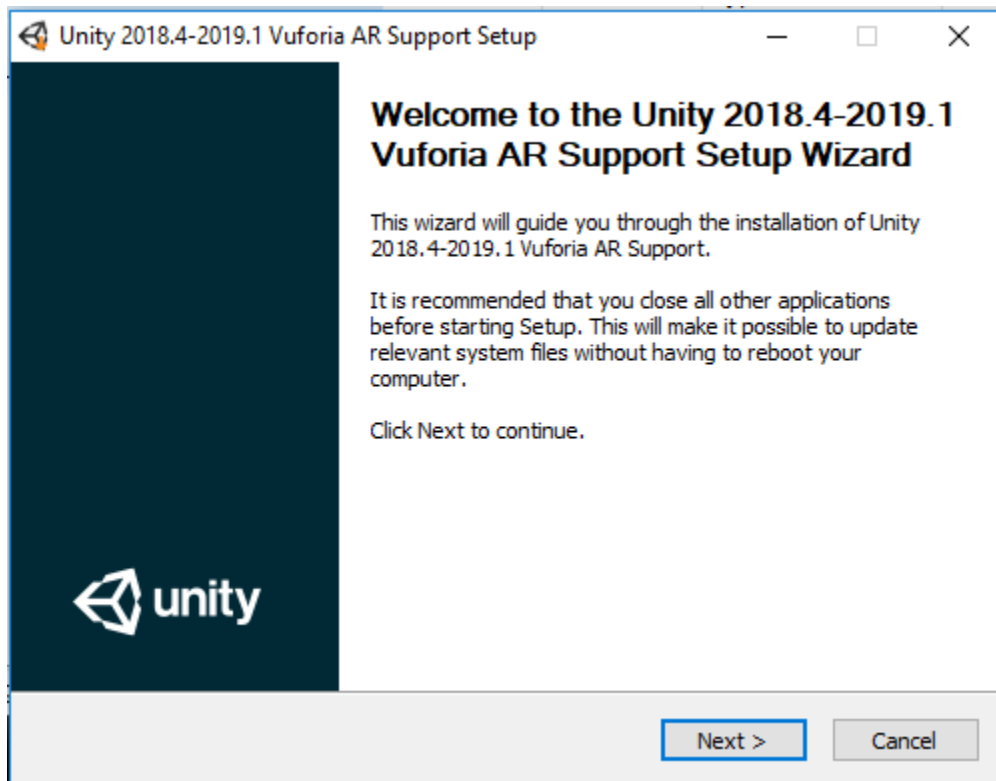

Connect your webcam

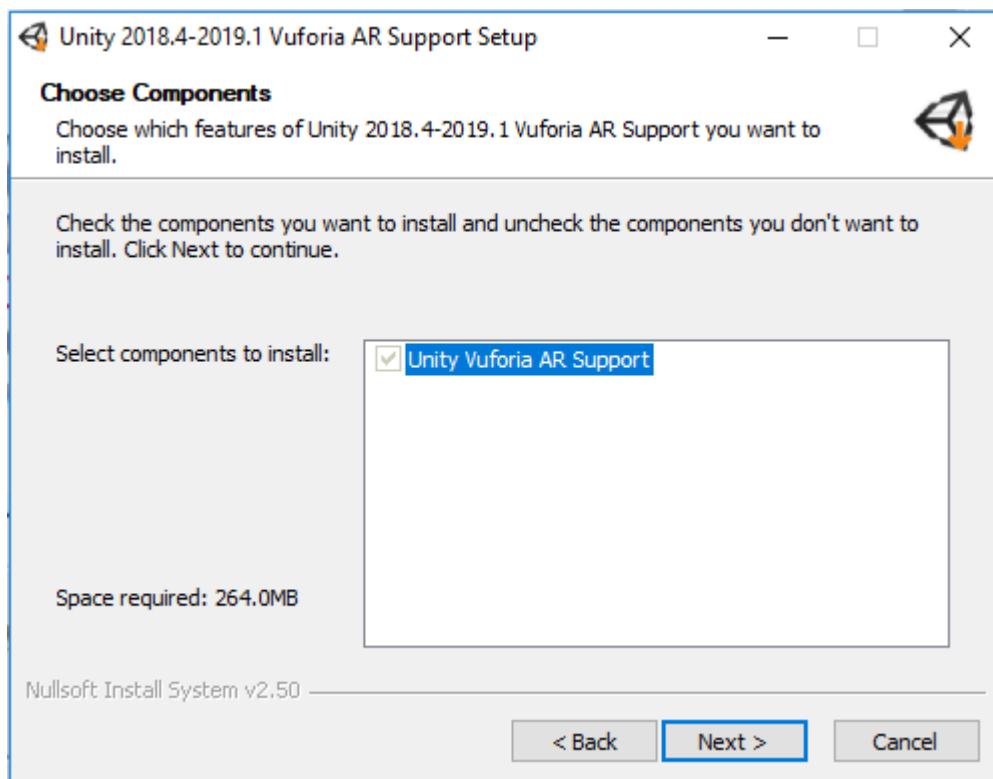

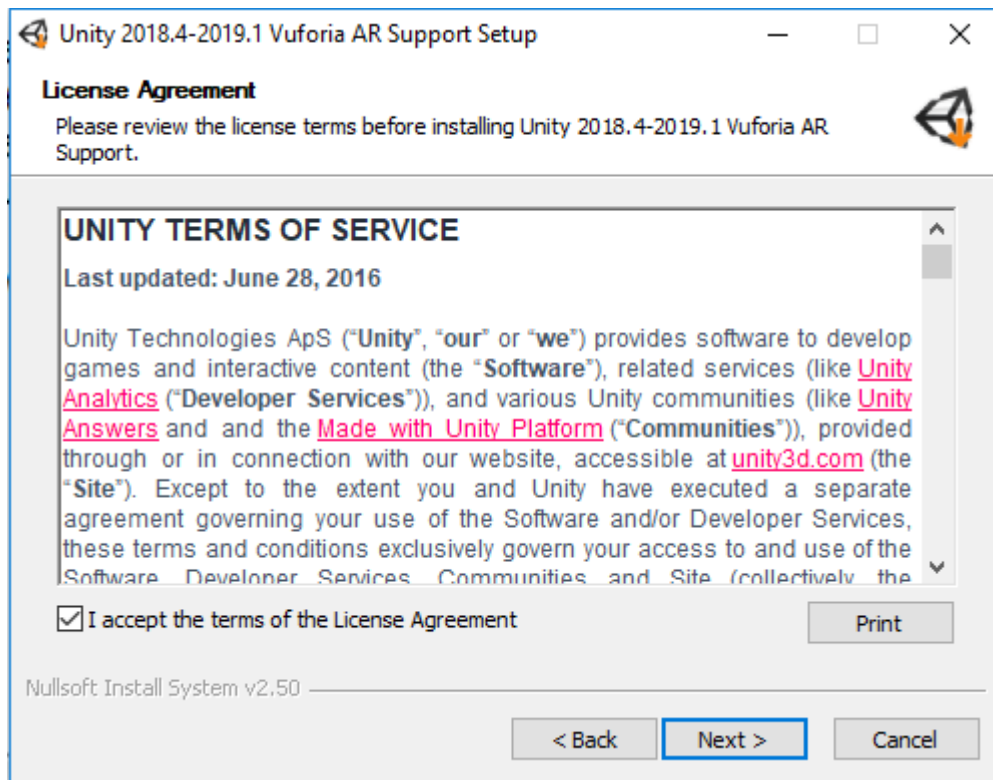

Now Under Assets folder-> Resources folder -> select VuforiaConfiguration object

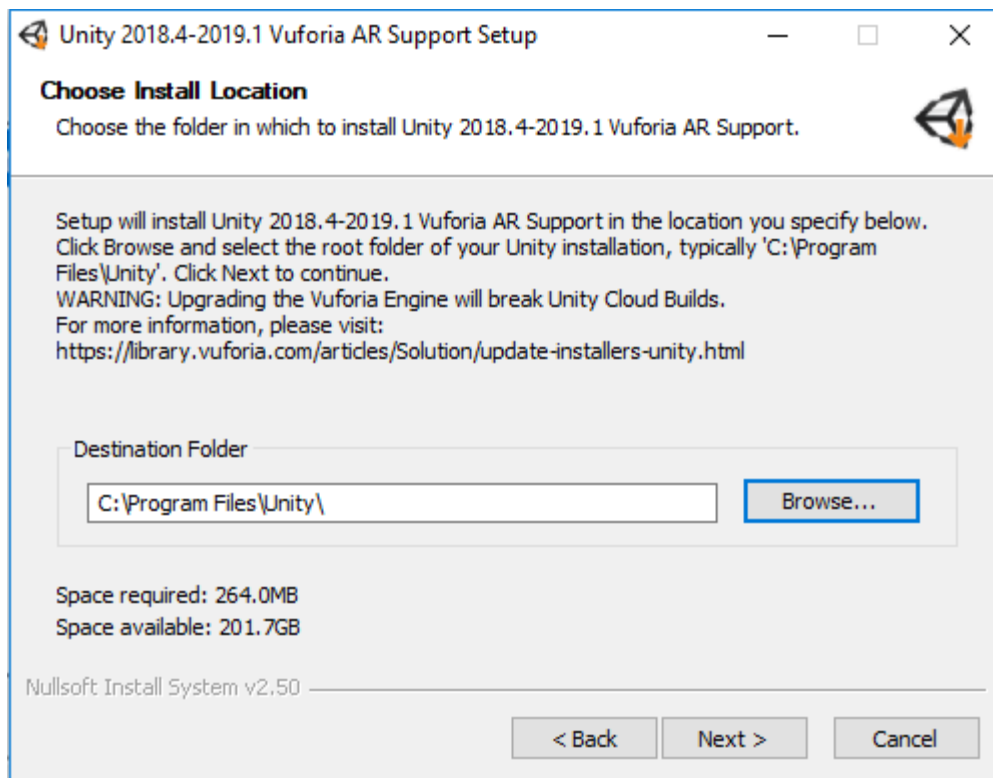

In its Inspector window scroll down and under Webcam -> Camera device -> select your camera

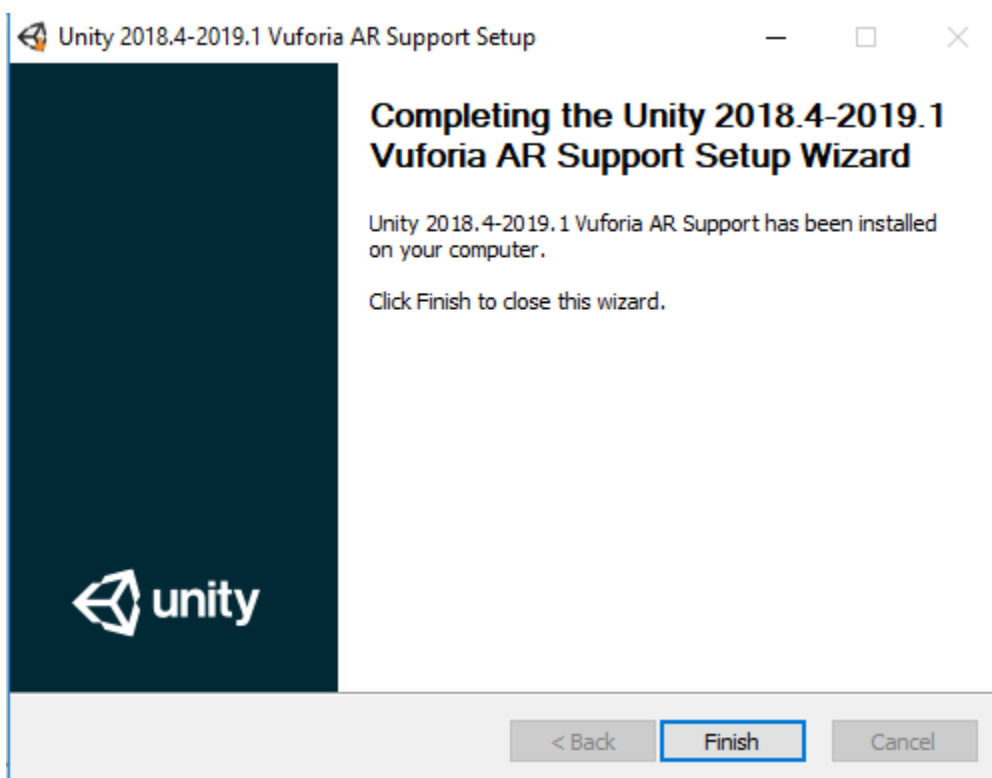

Now go to menu GameObject-> Vuforia Engine-> AR Camera

VuforiaConfiguration Inspector - Download Vuforia Engine 8.3.8

Adding Image Targets

Go to Prefabs folder and select Target template and drag it in the scene

The screenshot shows the Vuforia Target Manager web interface. The browser address bar displays <https://developer.vuforia.com/targetmanager/project/deviceTargetListing>. The navigation bar includes links for Home, Pricing, Downloads, Library, Develop, and Support, along with a user profile 'Hello RKhan' and a 'Log Out' button. The 'Target Manager' tab is active. The main content area shows the 'target_images' target, which is of type 'Device'. Below the target name, there is a 'Targets (1)' section with an 'Add Target' button. A 'Download Database (All)' button is also present. A table lists the target details:

Target Name	Type	Rating	Status	Date Modified
person1	Single Image	★★★★☆	Active	Jun 29, 2019 16:53

Download Database

1 of 1 active targets will be downloaded

Name:
